Sai Koushik Korada

Agentic AI Full Stack Engineer

PROFESSIONAL SUMMARY

Agentic AI Full Stack Engineer focused on building LLM-powered applications using LangGraph, LangChain, and FastAPI. Experienced in developing agentic workflows with tool calling, RAG, memory, and conditional routing, along with scalable backend systems and REST APIs. Strong in Data Structures and Algorithms with 1500+ problems solved across LeetCode and GeeksforGeeks, focused on building reliable, scalable, maintainable, and production-grade AI systems.

EDUCATION

B.Tech in Computer Science & Engineering 2023 – Present
RGUKT, Srikakulam **CGPA: 9.0**

TECHNICAL SKILLS

Languages: C++, Python, JavaScript
AI: LangGraph, LangChain, LLM Integration, Tool Calling, Basic RAG
Backend: FastAPI, Express.js, REST APIs, JWT, Apache Kafka, Microservices
Frontend: React.js, Redux
Database: MongoDB, MySQL, Redis, PostgreSQL
Tools: Git, Postman, Docker, Swagger, Vercel, Render
AI-assisted coding tools: GitHub Copilot, OpenCode, Antigravity

PROJECTS

ChatAI — AI-Powered Conversational Platform LangGraph · FastAPI · React.js · PostgreSQL · RAG

- Built a full-stack AI chat platform supporting multi-turn conversations, short-term and long-term memory, RAG-based document Q&A, summarization, and tool calling.
- Designed a modular LangGraph workflow with summarization, chat, memory, and tool nodes, using conditional routing to execute tools when required and continue the conversation flow.
- Built a RAG pipeline with document processing, chunking, embeddings, vector retrieval, semantic search, and context-grounded responses.
- Developed scalable REST APIs with FastAPI and PostgreSQL, and built the interactive frontend using React.js.

GitHub · Demo

E-Commerce Microservices Platform Node.js · Express.js · React.js · Kafka · MongoDB · MySQL · Redis

- Built a distributed e-commerce platform with 8 microservices for authentication, products, cart, orders, inventory, payments, notifications, and API gateway.
- Designed an event-driven architecture using Apache Kafka for asynchronous communication between loosely coupled microservices.
- Implemented microservices using Node.js and Express.js with MongoDB, MySQL, and Redis as service-specific data stores, along with JWT authentication and Redis caching.
- Implemented distributed locking for concurrent inventory operations and rate limiting to control request load, improving system performance and scalability.

GitHub

MediConnect — Healthcare Connectivity Platform React.js · Node.js · Express.js · MongoDB · JWT

- Built a full-stack healthcare platform using React.js, Node.js, Express.js, and MongoDB, enabling patients to search doctors, explore hospitals, and check blood bank availability.
- Implemented secure JWT authentication and role-based access control for patients, doctors, hospital administrators, and system administrators.
- Developed 50+ REST API endpoints for doctor and hospital discovery with specialization, location, and rating filters, along with blood bank information and user management.

GitHub · Demo

CODING ACHIEVEMENTS **Leetcode** · **Gfg**

- Solved 1500+ DSA problems across LeetCode and GeeksforGeeks, achieving a LeetCode Global Rank of 15,000, 1000+ GFG Coding Score, 500 Days badge, and Top 9% contest rating.
